

Traka KeyDock

'A key box with all the answers'

The Traka KeyDock is an intelligent, highly cost-effective management system for any organisation requiring complete control of its most valuable assets.

It is a self-installed unit, and is ideal for any business needing to manage keys to vehicles, equipment, machinery and secure areas.

- Control access to your most important keys
- Know when keys are taken and returned
- Ensure keys are available 24/7 – to authorised users only
- Download management information
- Help enforce H & S compliance
- Reduce costs and improve efficiency through accountability

Key management made easy

Using the Traka KeyDock is simple:

- 1** Users enter their 4-digit PIN. Coloured LEDs indicate which keys users are authorised to access.
- 2** Users select required keysets. Keys are attached to intelligent fobs with security seals, ensuring that only authorised keys can be taken.

- 3** To return a key, users enter their 4-digit PIN and replace the keyset in its designated position.

The system automatically records who has taken each individual keyset and when it was returned. A full report of user activity can be generated from the Traka software installed on your PC. Traka KeyDock enables you to trace all key usage confidently and effortlessly.
